**DETAILED ACTION**

***Allowable Subject Matter***

Claims 1-10 are allowed.

***Examiner's Statement Of Reasons For Allowance***

The following is an examiner's statement of reasons for allowance:

The invention is related to a method for measuring an alignment of two patterns in different layers on a semiconductor wafer, with a set of a fixed number of exposure fields selected for the alignment measurements and each of the exposure field having at least one alignment structure.

The primary reason for the allowance of claim 1-10 is the inclusion therein, in combination as currently claimed of the limitation of a method for measuring a series of alignment of two patterns in different layers on a semiconductor wafer with a set of a fixed number of exposure fields selected for the alignment measurements and each of the exposure field having at least one alignment structure. The limitation found in claims 1-10 comprises inter alia the following: performing an offset measurement using the first alignment structure and issuing an error signal if the offset could not be measured; performing an offset measurement on a second alignment structure in a substitute second exposure field outside the set; measuring a second relative offset of an alignment structure in a next exposure field of the set. The limitation found in claims 1-10 is neither disclosed nor taught by the prior art of record alone or in combination.
